

Activity 04: Course Project Proposal (Phase 01)

Smart Phones Programming

Faculty of Information Technology
Zarqa University

1st Semester – 2025/2026

Requirements

You are required to develop a Smartphone Project, as follows:

- A) The project must basically covers the main aspects given during the course.
- B) The students is encouraged to learn and apply new android skills (it will be an add-on).
- C) The project has to consist at least, of two activities and more.
- D) The bonus marks will be given to the best ideas.
- E) A committee of course lecturers will judge the projects at the end of the course.
- F) The teams must be conducted as follows:
 - a. Every student must participate in a group within the same class (cross classes are allowed only for the same lecturer).
 - b. The number of participants of each team must consists of two to four students.
 - c. A team leader is assigned to the team.
 - d. Download the form, fill it up, and upload it on the moodle. [Click here](#) to download

Key Sections of Your Proposal

To propose a mobile application for an Android course, structure your proposal with clear academic and technical sections.

Focus on the problem your app solves, its specific features, the technology you'll use, and a realistic plan for development and testing.

Section	Description
Title Page	Include a clear title (e.g., "Proposal for [App Name] Android Application Project"), your name/student ID, the course name/code, and the submission date.
Executive Summary/Abstract	A brief (around 200-250 words) overview of the entire project: the app's core idea, its purpose, the problem it solves, and the expected outcomes. This should be compelling enough to grab the reader's attention.
Introduction & Project Background	Explain the motivation behind your app. Detail the problem or user need you are addressing and discuss why an Android app is the appropriate solution. You can also mention any existing similar solutions and how your app will be unique (research gap).

Project Goals and Objectives	Clearly state what you aim to achieve. Use SMART (Specific, Measurable, Achievable, Relevant, Time-bound) goals. For example, "Develop a functional Android app that allows users to track their study hours and set reminders by the end of the semester".
Target Audience	Describe who will use your app. Define their age range, needs, and how your app will improve their experience.
Major Functions and Features	Provide a detailed breakdown of the app's core functionality. List specific features (e.g., user registration, push notifications, GPS functionality, database integration).
User Experience (UX) and App Flow	Describe how users will navigate and interact with the app. You can include basic wireframes, flowcharts, or diagrams to illustrate the user journey.
Technical Specifications and Methodology	Detail the technology stack and development methodology you plan to use.
Timeline and Milestones	Create a realistic schedule, broken down into key phases (e.g., planning, design, development, testing, deployment) with estimated completion dates for each milestone.
Testing and Quality Assurance Plan (Optional)	Outline your strategy for testing the app to ensure it is bug-free and user-friendly. Mention types of testing (unit testing, user acceptance testing) and how you will gather feedback.
Potential Risks and Mitigation (Optional)	Identify potential challenges or constraints (e.g., limitations in technical expertise, time constraints) and propose strategies to overcome them.
References/Bibliography	Cite any sources, research papers, or resources you used to inform your proposal.

Deliverables & Submission Guidelines:

Upload the following files having:

- A)** A Filled Project form.
- B)** A PDF document of your full proposal.
- C)** PowerPoint Slides to present the proposal.
